

U15

Force transducer

Special features

- Tensile/compressive force transducer
- Nominal (rated) forces 2.5 kN to 2.5 MN
- Class 0.5 to ISO 376 in force measurement range between 10% and 100% of the nominal (rated) force (in combination with DKD calibration certificate)
- Electronic bending moment adjustment
- Double bridge version, TEDS and other options available

Installed dimensions of connection variants

Connection cable with **bayonet connection**

Connection cable with **screw connection**

Connection cable with **angled bayonet connector**

Pin and cable assignment

Accessories (not included among the items supplied)

Order number	
K-CAL-F	DKD calibration certificate to ISO 376
K-CAB-F	Configurable connection cable for connecting the force transducer to the bridge amplifier. Different lengths are available. The relevant plug for an HBM amplifier can be fitted on request.
1-KAB157-3	Connection cable with bayonet locking; IP67; 3 m long, \varnothing 6.5 mm; TPE outer sheath; 6 x 0.25 mm ² ; free ends, shielded
1-KAB158-3	Connection cable with bayonet locking; IP67; 3 m long, \varnothing 6.5 mm; TPE outer sheath; 6 x 0.25 mm ² ; free ends, shielded
3-3312.0382	Loose connecting socket, bayonet locking
3-3312.0354	Loose connecting socket, screw locking

Single bridge SB	Without TEDS S	Without plug protection U	Bayonet connector B	Bayonet connector B	Adjusted J
Double bridge DB	With TEDS T	With plug protection P	Threaded connector G	Threaded connector G	Not adjusted U

K-U15-	2M50	SB	S	U	B	G	U
--------	------	----	---	---	---	---	---

The ordering example is for a U15 with a nominal (rated) force of 2.5 MN with one measuring bridge (single bridge), without transducer identification (TEDS), bayonet connector and without adjusting the rated output.

No. of meas. bridges	For reasons of redundancy, it is necessary in devices relevant to safety to check the plausibility of the measurement signal with a second measuring bridge. The signals are independently conditioned and evaluated using two separate measuring amplifiers. So the option is also available to connect two amplifiers with different characteristics.
Transducer identification	With this option, you can order an integrated TEDS (Transducer Electronic Data Sheet), installed in the U15. Assuming the relevant amplifier electronics are present, the amplifier system reads out this chip and automatically sets the parameters.
Plug protection	Mechanical protection by fitting an additional, strong, square profile (tubular profile for nominal (rated) force 2.5 MN) around the plug.
Electrical connection Bridge A	The standard version is the device plug with a bayonet connection (PT02E 10-6P-compatible). You also have the option of ordering a device plug with a screw thread (PC02E 10-6P-compatible).
Electrical connection Bridge B	The standard version is the device plug with a bayonet connection (PT02E 10-6P-compatible). You also have the option of ordering a device plug with a screw thread (PC02E 10-6P-compatible)
Rated output	The standard version is a non-adjusted (calibrated) rated output. In all sensors with nominal (rated) forces greater than 10 kN, the output signal at nominal (rated) force is between 4 and 4.8 mV/V. In all force transducers with nominal (rated) forces up to and including 10 kN, the output signal is between 2 and 3 mV/V. If you choose the 'adjusted rated output' option, the rated output will be adjusted to 3 mV/V (all transducers greater than 10 kN) or 2 mV/V (all transducers up to and including 10 kN). Please note the input range of your amplifier.

Subject to modifications.
